Thank you, Gary. I received many calls, emails and photos from community members over the weekend. Residents in the River Bottom say this past weekend was the worst flooding they have seen since Hurricane Ike. See the attached photo (10:31:15 Water Level Channelview River Bottom) with a tape measurer showing the water depth at a home near Meadowbrook Park. Residents say that the Memorial Day flood levels at their properties were about a foot lower than this past weekend.

I've been told that early Saturday morning, October 31, 2015 the Waste Pits were completely under water and that heavy wind and waves were blowing in from the South. The roadway and areas from Monmouth to the Waste Pits were flooded and impassable.

I see the previously sent info from David Keith but I feel that this information is important as it is what's actually occurred nearest and at the Waste Pits. See attachments for additional photos of flooding Halloween Weekend.

There were 6 tornados that touched down in the Houston Area this past weekend, one was between Barrett Station and Highlands. The local cemetery (Sterling White Cemetery) is in shambles right now due to the tornado. I cannot imagine if this had been the Waste Pits.

I appreciate the EPA and RP's quick responses after the past two weekends of flooding in the Houston Area. Will there be another visual inspection this week?

Thank you,
Jackie Young

Subject: San Jacinto Flows

Gary and Carlos – The attached shows the rainfall totals and flows in the San Jacinto River that resulted from the storms over the weekend. There was about 6 inches of rain on Saturday, but the river stayed well below the 10 year flood elevation and is receding at this point.

Regards,

David
